

Blue Water Design Backplanes

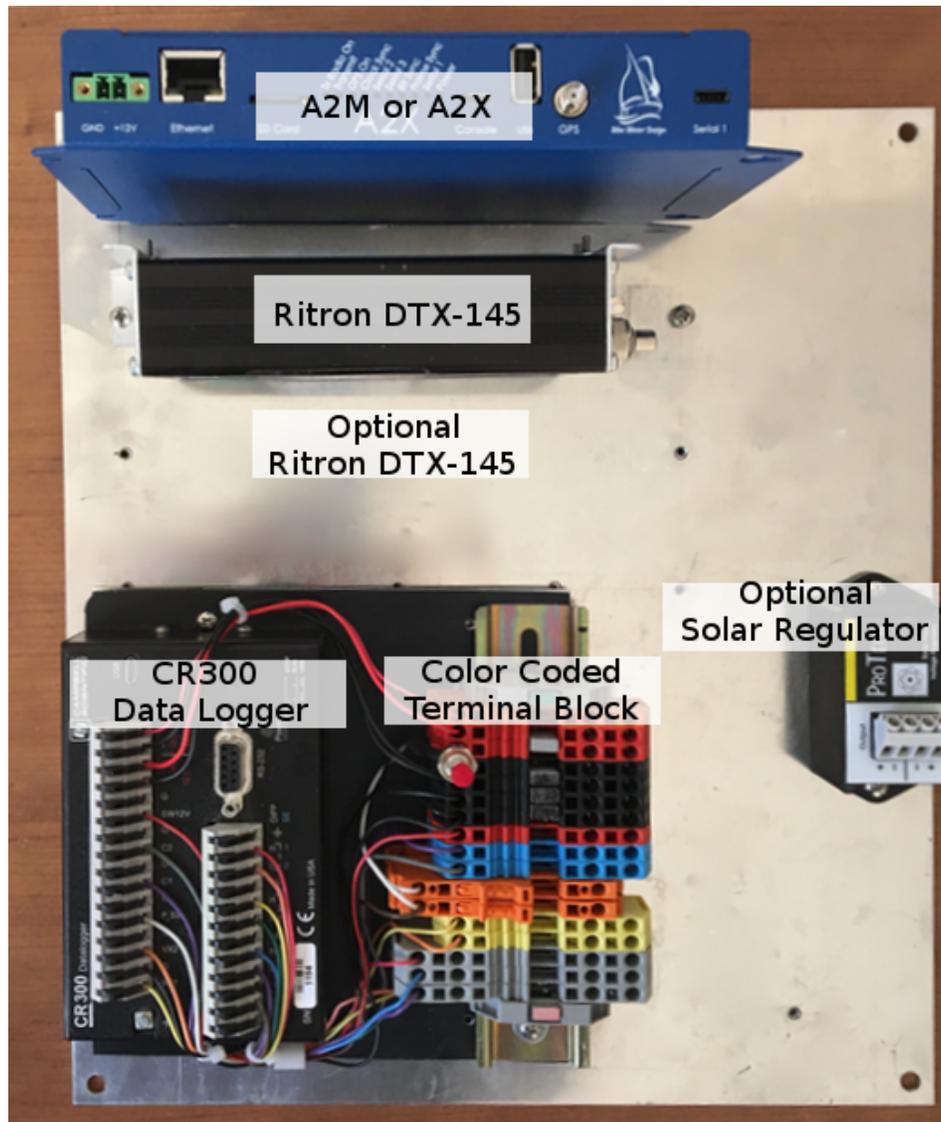

Image showing the layout of Blue Water Design's flexible backplane. Dimensions are 10.88" x 12.75". Cables are not shown for clarity.

The backplane can support either an A2M (encoder) or A2X (decoder/encoder), and one or two radios (Ritron or Maxon), for base station or repeater options. Space is available for an optional solar regulator (compatible with both High Sierra's ProTech or MorningStar's SunSaver-6). In any of the above configurations, the backplane can accommodate a CR300 Data Logger and a color coded terminal block for sensor wiring.
